 Git-2.42.0.2-64-bit

Information

Please read the following important information before continuing.

When you are ready to continue with Setup, click Next.

infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any

Select Components

Which components should be installed?

Select the components you want to install; clear the components you do not want to install. Click Next when you are ready to continue.

- ☐ Additional Icons
 - ☐ On the Desktop
- ☒ Windows Explorer integration
 - ☒ Open Git Bash here
 - ☒ Open Git GUI here
- ☒ Git LFS (Large File Support)
- ☒ Associate .git* configuration files with the default text editor
- ☒ Associate .sh files to be run with Bash
- ☐ Check daily for Git for Windows updates
- ☐ (NEW!) Add a Git Bash Profile to Windows Terminal

Current selection requires at least 321,5 MB of disk space.

Cette étape permet de choisir l'éditeur de texte par défaut. On choisira Notepad++ sans la liste déroulante. Il faut bien sûr que Notepad++ soit installé au préalable.

Choosing the SSH executable

Which Secure Shell client program would you like Git to use?

☒ **Use bundled OpenSSH**

This uses ssh.exe that comes with Git.

☐ **Use external OpenSSH****NEW!** This uses an external ssh.exe. Git will not install its own OpenSSH (and related) binaries but use them as found on the PATH.<https://gitforwindows.org/>

Choosing HTTPS transport backend

Which SSL/TLS library would you like Git to use for HTTPS connections?

☒ **Use the OpenSSL library**

Server certificates will be validated using the ca-bundle.crt file.

☐ **Use the native Windows Secure Channel library**Server certificates will be validated using Windows Certificate Stores.
This option also allows you to use your company's internal Root CA certificates distributed e.g. via Active Directory Domain Services.<https://gitforwindows.org/>

Configuring the line ending conversions

How should Git treat line endings in text files?

☒ **Checkout Windows-style, commit Unix-style line endings**

Git will convert LF to CRLF when checking out text files. When committing text files, CRLF will be converted to LF. For cross-platform projects, this is the recommended setting on Windows ("core.autocrlf" is set to "true").

☐ **Checkout as-is, commit Unix-style line endings**

Git will not perform any conversion when checking out text files. When committing text files, CRLF will be converted to LF. For cross-platform projects, this is the recommended setting on Unix ("core.autocrlf" is set to "input").

☐ **Checkout as-is, commit as-is**

Git will not perform any conversions when checking out or committing text files. Choosing this option is not recommended for cross-platform projects ("core.autocrlf" is set to "false").

Configuring the terminal emulator to use with Git Bash

Which terminal emulator do you want to use with your Git Bash?

☒ **Use MinTTY (the default terminal of MSYS2)**

Git Bash will use MinTTY as terminal emulator, which sports a resizable window, non-rectangular selections and a Unicode font. Windows console programs (such as interactive Python) must be launched via `winpty` to work in MinTTY.

☐ **Use Windows' default console window**

Git will use the default console window of Windows ("cmd.exe"), which works well with Win32 console programs such as interactive Python or node.js, but has a very limited default scroll-back, needs to be configured to use a Unicode font in order to display non-ASCII characters correctly, and prior to Windows 10 its window was not freely resizable and it only allowed rectangular text selections.

Choose the default behavior of `git pull`

What should `git pull` do by default?

☒ **Default (fast-forward or merge)**

This is the standard behavior of `git pull`: fast-forward the current branch to the fetched branch when possible, otherwise create a merge commit.

☐ **Rebase**

Rebase the current branch onto the fetched branch. If there are no local commits to rebase, this is equivalent to a fast-forward.

☐ **Only ever fast-forward**

Fast-forward to the fetched branch. Fail if that is not possible.

Choose a credential helper

Which credential helper should be configured?

☐ **Git Credential Manager**

Use the [cross-platform Git Credential Manager](#).

See more information about the future of Git Credential Manager [here](#).

☒ **None**

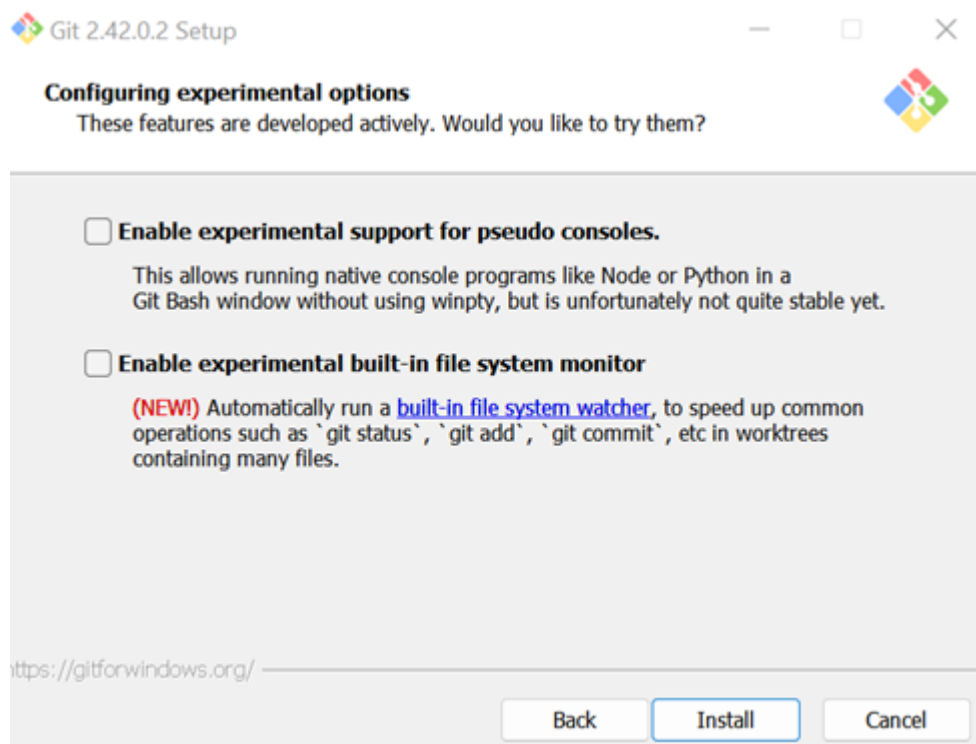

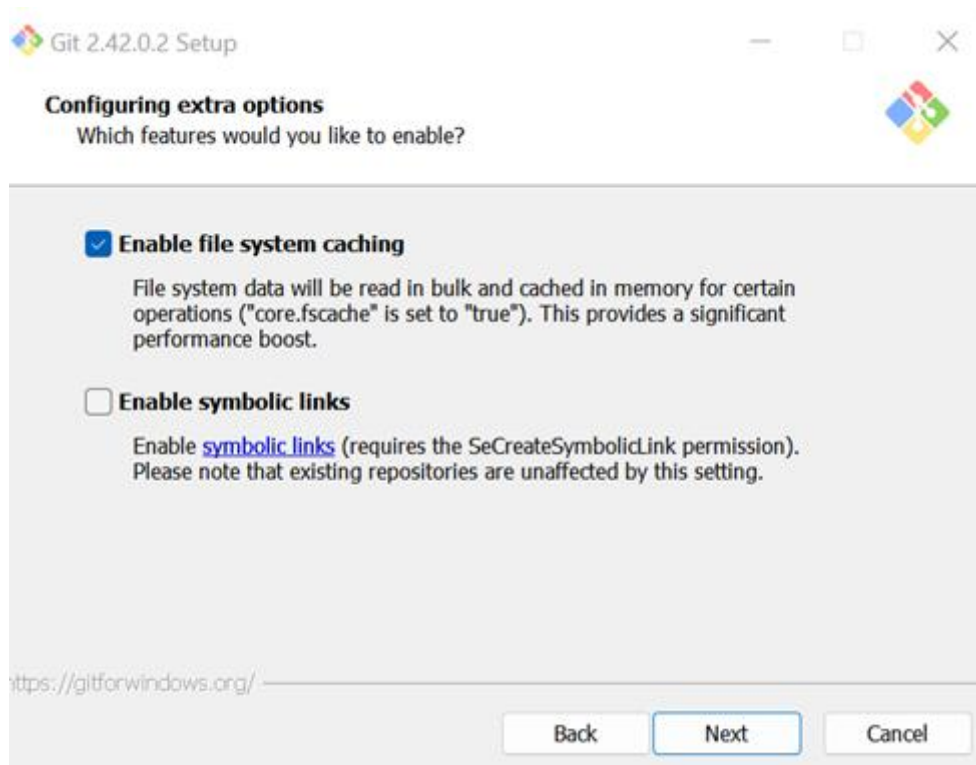

Do not use a credential helper.
